Amplifier Model Selection Guide

1. Bandwidth

It refers to the frequency at which the sine wave curve input signal attenuates to 70.7% of the true signal amplitude, that is -3dB point. The amplifier must have enough bandwidth to amplify and monitor the input signal.

2. Voltage

When choosing the amplifier, it is necessary to consider whether the output voltage is enough in combination with the -3dB bandwidth. If the test has higher requirements on the voltage, a certain voltage margin should be reserved.

3. Current

According to the impedance of the tested load, the amplifier which can meet the test current demand is selected.

4. Voltage gain

If the input signal is a specific voltage signal, the voltage gain should be considered when selecting the amplifier.

5. Load

According to the test conditions of the tested load, verify whether the selected amplifier meets the requirements.

6. Options

Digital Monitor: 14 bit vertical resolution, with voltage and current back reading function, voltage and current waveform display function.

Programmable interface.

ATA-1000 Series Wide Band Amplifier

Main features

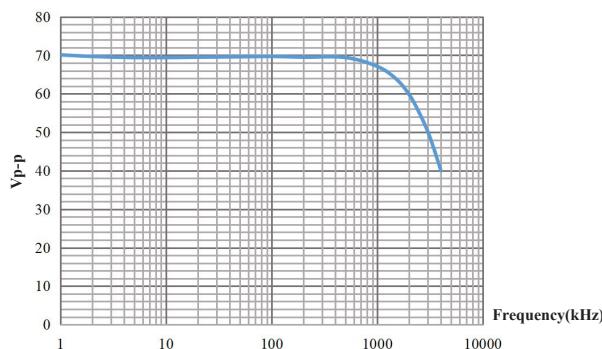

- High bandwidth 22MHz
- BNC output connector
- Voltage gain numerically adjustable
- One key saving common settings

Applications

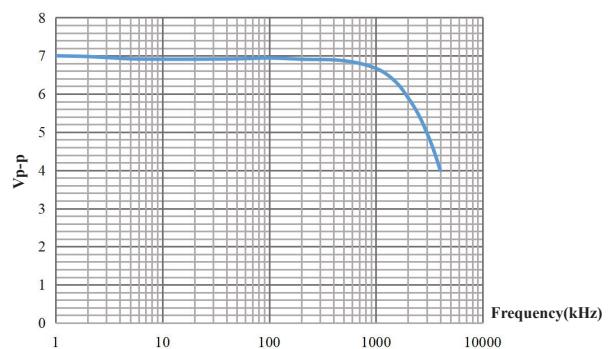

- Electronic experiments in universities and colleges
- MEMS
- Ultrasonic tests
- To drive the electromagnetic field
- Wireless power transmission

Technical Parameters

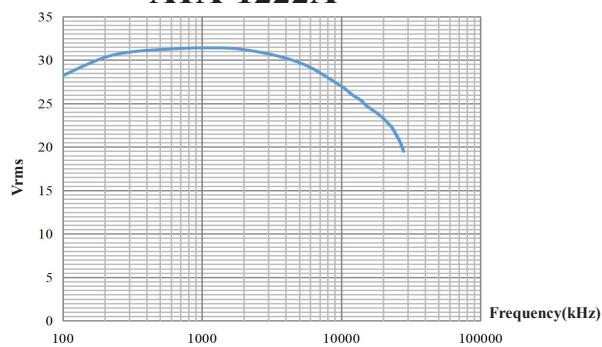

Model	ATA-1372A	Model	ATA-1222A
Form of output	Single output	Class of operation	Class AB
Bandwidth(-3dB)	DC~3MHz	Bandwidth	100kHz~22MHz
Maximum output voltage	70Vp-p (± 35 Vp)	Rated output power	20W
Maximum output current	1Ap (DC~50Hz)	P1dB output power	40W
	2Ap (>50Hz)	Power gain power	40dB(20dB~40dB/0.5dB step adjustable)
Maximum output power	70Wp	Input signal of the rated output power	316mVrms/2mW/3dBm (40dB gain 1MHz)
Voltage gain	x0~40 (0.1 step/1 step)	Lossless maximum input signal	1Vrms/20mW/13dBm
Upper limit of load R_L	$\geq 33\Omega$ (DC~50Hz)	Input resistance	50Ω

Power Signal Generator Selection Guide

1. Waveform

Sine wave, square wave, triangle wave, pulse wave.

2. Bandwidth

It refers to the frequency at which the sine wave curve input signal attenuates to 70.7% of the true signal amplitude, that is -3dB point.

3. Amplitude

When selecting the power signal source, it is necessary to consider whether the output amplitude is sufficient or not, and the output amplitude will be attenuated to 70.7% at -3dB frequency point, so redundancy should be considered.

4. Current

According to the impedance of the measured load, the power signal source which can meet the current demand is selected.

5. Load

According to the test conditions of the tested load, verify whether the selected power signal source meets the requirements.

Note: The input signal of power signal source can be connected by internal or external devices, which provides a flexible and rich test environment for customers.

(1) The power signal source mode is used when the built-in access is adopted, and the waveform parameters can be directly output;

(2) The external access mode is amplifier mode. The signal is input from the 'input' port. The signal can be amplified by adjusting the "amplifier" magnification.

ATG-2000 Series Power Signal Generator

Main features

- Output sine wave, square wave, triangle wave, pulse wave
- Input signal can be built-in or external
- Output voltage up to 1600Vp-p ($\pm 800Vp$)
- Output current 500mA
- Bandwidth (-3dB) DC~1MHz

Applications

- Electronic experiments in universities and colleges
- MEMS
- Ultrasonic tests
- To drive the electromagnetic field

About Aigtek

Aigtek is a leading high-tech enterprise engaged in R&D, manufacturing and sales of measuring instruments in China. The company is committed to the amplifiers, calibration source products as the core of the related industry test solutions, to provide users with competitive test solutions. Aigtek has become a large-scale equipment manufacturer with a wide range of product lines in the industry.

Relies on the well-known scientific research institutions of Xi'an Jiaotong University and Northwest Polytechnic University, Aigtek has formed a professional R&D team who are with international advanced technology, and has obtained 97 patents and software copyrights. Our experienced senior engineers can complete the development and production of various test equipment and test systems. Every valued customer can enjoy the services of prototype trial use, technical training etc.
